

# Use Cases of Software Engineering project - Planner

Rafał Szulc

3 May 2021

Use Cases:

- registration
- logging in
- adding event
- removing event
- searching for event
- modifying events data
- displaying alert
- exporting data to txt file
- deleting account

A description of a specific case: logging in

Main path: (assumption: user has an account and has The Planner app)

1. asking for username and password
2. user gives his username and password
3. system checks if given data is correct
4. user is correctly logged in

Alternative path:

- in 3 given data is incorrect
  - return to 1 with message "Incorrect username and password."

A description of a specific case: registration

Main path: (assumption: user has The Planner app)

1. asking for username, password and same password
2. user gives his username and password (2 times)
3. system checks if given data is allowed
4. user is correctly registered
5. sending user to logging in window

Alternative path:

- in 3 given passwords are not the same
  - return to 1 with message "Incorrect, different passwords."

Alternative path:

- in 3 given username is already used
  - return to 1 with message "This username is already occupied."
